INSTRUCTIONS FOR PLANTING

When the trees arrive, remove all straw from them. Heal them in wetting them good. Tread the dirt to keep out the air. Dig hole large enough to admit all roots without crowding. Set two inches deeper than tree stood in Nursery row, and cut away with sharp knife all bruised roots.

Cut one-year trees back to 24 to 30 inches after planting. Head branch two-year trees back to 3 to 5 buds from main stem.

The county pest inspector carefully inspects all our trees before they are sent out.

This little Booklet comes to you just to acquaint you with some of the varieties we grow—just some of the leaders... We could not list them all in so small a book.

Our trees are grown by experts and carefully packed when shipped out of Provo.

We exercise care to have all trees delivered true to label, and stand ready to replace without cost should a mistake occur.

In no case will we be responsible for a greater sum than the original cost of the trees to the planter.

We invite you to come and Inspect the
Trees at our Grounds.
